

NISHANT RATHORE

Full Stack & DevOps Engineer | AWS, Docker, Kubernetes, Terraform | Web & Mobile

+91-880-078-4843 | New Delhi, India | rnishant428@gmail.com
[Github.com](#) | [Linkedin.com](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Engineer with 3+ years of experience building scalable web and mobile applications using React, Node.js, Angular, React Native, and AWS. Experienced in REST APIs, Redis caching, CI/CD pipelines, Docker, Kubernetes, and cloud-native deployments. Skilled in performance optimization, real-time systems, RBAC architecture, and scalable backend design.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Angular, Redux Toolkit, Tailwind CSS, Material UI, Bootstrap

Backend: Node.js, Express.js, REST APIs, Socket.IO, Swagger

Mobile: React Native (Expo), Ionic Framework

Databases: MongoDB, PostgreSQL, MySQL, MariaDB, Redis

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, ECS, EKS, ELB, API Gateway, IAM, VPC) | GCP (Compute Engine, GKE) | Docker, Kubernetes, Terraform, Ansible, Jenkins, CI/CD Pipelines, Prometheus, Grafana, Linux, Nginx

Authentication & Security: JWT, OAuth, Firebase Authentication, RBAC

Tools & Platforms: Git, Postman, Jira, Confluence, Figma, Firebase Cloud Messaging (FCM), Razorpay, Stripe, n8n

AI/ML: LLM Integration, Prompt Engineering, Gemini API

PROFESSIONAL EXPERIENCE

Full Stack Engineer | [Tallento.ai](#) | Remote

December 2025 – March 2026

- Designed and implemented CI/CD pipelines using Jenkins, Docker, and AWS infrastructure, reducing deployment time and minimizing manual deployment effort.
- Built a scalable RBAC authorization system supporting multiple roles and permission layers, improving security and access management.
- Developed a production-grade social feed module supporting media uploads, comments, likes, shares, and configurable visibility controls.
- Improved backend performance using Redis caching, frontend debouncing, and render optimization, reducing API latency and database load.
- Implemented real-time chat functionality using Socket.IO for instant communication between employers and candidates.
- Integrated Firebase Cloud Messaging (FCM) push notifications for real-time hiring and application status updates.
- Contributed to migration from legacy PHP architecture to a modern scalable MERN stack, improving maintainability and long-term scalability.
- Centralized media handling architecture by migrating multiple media tables into a unified storage structure, simplifying database operations and improving media retrieval.

MERN Stack Developer (Freelance) | [Independent Contractor](#) | Remote

June 2025 – September 2025

- Architected and managed AWS cloud infrastructure using EC2, VPC, and Security Groups to support secure and scalable deployments.
- Designed scalable HLD and LLD architecture for a React Native trading-learning platform.
- Developed gamified learning systems including quizzes, streaks, badges, leaderboards, and challenge modules to improve user engagement.
- Optimized frontend performance using lazy loading, modular architecture, and optimized API integration strategies.
- Integrated Firebase Authentication with email, phone, and social login using secure OAuth authentication flows.
- Implemented Razorpay payment gateway with webhook validation and secure subscription-based payment processing.

React Native Developer | [GDKN / Techrev \(Client: ENotaryOnCall\)](#) | Remote

March 2024 – June 2025

- Built and maintained a production-ready React Native (Expo) mobile application with reusable and scalable component architecture.
- Managed Android and iOS deployment pipelines including production builds, app signing, release management, and store publishing.
- Integrated backend APIs with Redux Toolkit state management and frontend performance optimization techniques.
- Improved application responsiveness through memoization, render optimization, and scalable UI architecture.
- Delivered responsive cross-platform mobile UI using Tailwind CSS and modular frontend design principles.

MEAN Stack Developer | [GDKN / Techrev \(Client: KeepFluent\)](#) | Remote

January 2023 – June 2025

- Managed AWS EC2 and S3 infrastructure for scalable application hosting and secure cloud-based media storage.
- Developed scalable REST APIs using Express.js with modular architecture, middleware integration, and secure authentication.
- Built Angular web applications and Ionic mobile applications with reusable component architecture and optimized API integration.
- Designed responsive user interfaces using Bootstrap and Material UI across multiple device breakpoints.
- Optimized SQL database performance using query optimization, indexing strategies, and relational schema improvements.
- Implemented Redis caching for API responses and database queries, improving backend performance and reducing redundant database calls.
- Managed production deployments, server monitoring, and cloud configuration using secure Linux server administration.
- Built centralized logging systems using Winston and Morgan for application monitoring, debugging, and traceability.

Teaching Assistant – Backend Engineering | [FunctionUp](#) | Remote

August 2022 – December 2022

- Mentored students on Node.js, MongoDB, AWS, and backend engineering concepts.
- Conducted live coding sessions focused on debugging, clean code practices, and backend architecture.
- Provided 1-on-1 technical guidance for assignments, backend projects, and capstone implementations.

EDUCATION & CERTIFICATIONS

DevOps & Cloud Certification – CloudDevOpsHub / 2026

DSA & System Design Certification – Get SDE Ready / 2025 – 2026

React Advanced Certification – Namaste JavaScript / 2025

Software Development Certification – FunctionUp / 2022

Bachelor of Commerce – University of Delhi / 2017 – 2021

ACHIEVEMENTS

- Built and deployed scalable production-grade web and mobile applications.
- Published mobile applications on Google Play Store and Apple App Store.
- Automated CI/CD workflows using Jenkins, Docker, and AWS infrastructure.
- Experienced in scalable backend systems, cloud-native deployments, and real-time applications.
- Strong understanding of system design, distributed systems, and performance optimization.

PERSONAL PROJECTS

SwiftCart – Full Stack E-Commerce Platform

- Built a scalable MERN e-commerce platform with advanced product filtering, cart management, order workflows, and admin analytics dashboard.
- Implemented JWT authentication, Stripe payment integration, secure webhook validation, and idempotent order processing.
- Integrated Redis caching and AWS S3 storage to improve application scalability, media delivery, and backend performance.
- Designed modular backend architecture with production-grade APIs and secure authentication flows.

AI Code Reviewer Agent – LLM-Powered Developer Tool

- Developed an AI-powered code review system using Google Gemini for automated analysis of code quality, readability, security vulnerabilities, and performance bottlenecks.
- Engineered structured review pipelines generating categorized issue analysis, root cause explanations, and recommended fixes.
- Reduced manual first-pass review effort through automated code quality evaluation workflows.
